

Web = Endless Possibilities

Business Consulting

Mobiloitte provides end to end solutions on cutting-edge technologies, backed by experienced and domain knowledge consultants. These subject matter experts understand your requirements in depth and provide their suggestions, both on business as well as technical fronts to enable you make informed decisions.

They gather requirements and analyse multiple solutions, conduct thorough technical feasibility to ensure most optimum output and timely delivery.

Web Solution Offering

The web solutions provided by Mobiloitte are compliant with W3C and IEEE guidelines. Since web solutions run on HTTP protocol it is stateless and vulnerable. Request-Response throughputs is another aspect that needs close attention as there is a trade-off between security and performance.

Mobiloitte caters to all these aspects and provide a highly scalable (both scale-out and scale-in), performant and responsive web and CMS based solutions without compromising on security and multi-browser compatibility.

Mobility Solution Offering

Backed by 10 plus years of experience we design and deliver high quality Mobile Apps on all platforms and more than 20 domains. The use of reusable code and component library helps Mobiloitte deliver project in 30% less time.

Mobile apps are seamlessly integrated with middleware and SaaS based model for a complete and efficient user experience. We are fully geared up for mobility solutions on IoT (Internet of Things) which is emerging as a niche platform to connect various devices through apps.

QA & Testing

The role of QA is unquestionable when it comes to delivering a bug free, requirement confirmative app. The QA team performs all types of quality assurance tests such as Smoke Testing, UI/UX Testing, target device compatibility testing, load testing, security testing, full functional testing, regression testing and soak testing.

Both automated and manual tests are performed by using multitude of testing tools such as Ranorex, Selenium, Neoload etc. to reduce number of iteration cycles. Our benchmark is 1 bug per 100 lines of code. Hence development is also done on TDD (Test Driven Development) methodology with mandatory unit testing using tools such as JUnit, NUnit, Karma etc.

Support & Maintenance

Web and portal features require continuous updates due to technology developments and cascading business requirements, hence the support and maintenance team keeps working on performance optimization, migration and re-engineering.

Online Marketing

Marketing is done via multiple techniques that use pre-existing social networking services and other technologies to increase brand awareness or to achieve other marketing objectives (such as product sales), through self-replicating viral processes, analogous to the spread of computer viruses.

Serious efforts in Search Engine Optimization (SEO) and Social Media Marketing (SMM) help your website gain awareness and visibility.

A Glimpse of our Web Portfolio

Mobile & Web

- Business Consulting
- Apps Design & Development
